

NEXTRASEARCH

Innovative and efficient solutions for Pharma

Who we are

Not the usual CRO, but a pharma consultancy boutique

*Nextrasearch was born with the declared mission of providing to its customers **tailor made services**, fitted on their specific, real needs. We do not take into any consideration the standard prêt-à-porter consultancy.*

***Lean organization, customizations, proactivity** and **search for the most effective way** to achieve the result are the characteristics we strongly wanted to distinguish our company.*

*The market and rulings evolution requires to the Pharmaceutical world to **minimize the time to market** of the new products, and to make it **efficiently**; that's why we have designed a **streamlined organization** which takes advantage of a significant network of partners to always provide the optimal support needed by any business need: **quick, customized and cost-efficient**.*

Our services

We cover the three scientific areas of the pharma, because we want to offer a holistic and integrated approach to the product development issues.

Pre-clinical and clinical studies

Managed internally or thru a team of CRO partner and scientific advisors

We take care of:

- *Developing the **protocol***
- *Identifying the centers and optimizing the number of **patients***
- *Manage the **Ethical Committees** and obtain the needed authorizations*
- ***Monitoring** the trial*
- *Draw **reports** and **statistics***
- *Optimize the **registration strategy***

Pharmacovigilance

*We take charge of our customers' pharmacovigilance necessities, acting as **QPPV**, **LQPPV** providing highly qualification professionals.*

*Our support **is multilevel and scalable**, fitting the effective and specific needs.*

Standard, Professional and Specialist are the three-service level we offer.

Regulatory affairs Registration services

*We are the external support of **Regulatory Affairs**, allowing our customers to outsource the non-core activities (CEP/CER, BEP/BER etc), or to back-up the internal staff to cover personnel lacks.*

We drive our customers in the design and implementation of Quality systems.

We support and coordinate ISO certification activities (ISO 9001, ISO 13485)

Our expertise areas

We do not pretend to be generalist, we admit it, some markets and products are closer to our experience, to our approach and history.

Pharma

We develop projects in mostly all the branches of the pharma market, but we are particularly focused to Dermatology Gynaecology, Orthopaedy, Cardiology and Gastroenterology, which are our natural environment.

We are shareholders in start-up to develop innovative drugs in the cardiovascular area.

Medical Device

The new Medical Device European Regulation nr. 745/17 is putting at risk the registration of several devices; Nextrasearch created a new specific algorithm to make efficient the registration process, both for the new devices for the already existing ones.

API, food supplements,

We support the development and registration of innovative food supplements and nutraceutical products.
One of the most dynamic areas is the cannabinoid products.

The team

Nextrasearch partners have followed different professional profiles, in the team everyone has specific, integrated, responsibilities.
